

Gas safety in your home

You may only think about your gas appliances when something goes wrong, but having a badly fitted or poorly serviced gas appliance can put you and your family at risk.

Gas Safe Register is the only official list of gas engineers who are registered to work safely and legally on gas appliances. By law, all gas engineers must be on the Register.

Only use a Gas Safe registered engineer to fit, fix or service your gas appliances.

Remember to also check the Gas Safe Register ID card to make sure the engineer is qualified for the work you need doing.

Find and check a Gas Safe registered engineer at:

 [GasSafeRegister.co.uk](https://www.gas saferegister.co.uk)

 0800 408 5500

Keep your home gas safe

Follow these simple tips to stay safe:

- Have your gas appliances checked every year by a Gas Safe registered engineer.
- Check for warning signs on or around gas appliances (like soot or staining, increased condensation, floppy yellow flames, the boiler pilot light keeps going out).
- Don't DIY or use an illegal gas worker. If they're not on the Gas Safe Register, they're working illegally and could be putting you at risk.
- Carbon monoxide (CO) is a highly poisonous gas that you cannot see, smell or taste. Fit an audible CO alarm marked EN50291 to alert you if it's present.
- Know the signs of CO poisoning. Seek help immediately if you're experiencing headaches, dizziness, nausea, breathlessness, collapse and loss of consciousness.

Smell gas or suspect CO?

Call the gas emergency number:

 **0800111999**
